

5" × 7" Folded Card Template

Card size

- Flat sheet: 10" × 7" (landscape). Folds in half at 5" to make a 5" × 7" card.
- Pages 2 and 3 are the full 10" × 7" sheet: outside, then inside. Page 4 is a single 5" × 7" panel (the card front) if you only design one side.

How to use

- Use the page sizes above as your canvas in Canva, Word, Photoshop or any design tool. Place your artwork inside the green dashed safe area; the gray outline is the paper edge.
- On the outside spread, the RIGHT half is the card front and the LEFT half is the back. The red dashed line is the fold. Delete the guides before printing.

Printing tips

- Print at 100% / actual size. Turn off "fit to page".
- Choose a heavy paper or cardstock setting and test on plain paper first.
- Most home printers cannot print to the very edge, which is why the safe area is 0.25" in. Check your printer manual for its limits and for the paper sizes it accepts.
- Feed one card at a time. The cards are scored for easy folding, so fold after the ink is dry.

BACK (outside)

green dashed line = safe area (keep artwork inside)

FRONT (outside)

green dashed line = safe area (keep artwork inside)

INSIDE LEFT

green dashed line = safe area (keep artwork inside)

INSIDE RIGHT

green dashed line = safe area (keep artwork inside)

CARD FRONT 5" × 7"

green dashed line = safe area (keep artwork inside)
